

SKIN PACK

Skin Pack is a skin-like film that covers the top of the product (meat or food) and is tightly integrated with the tray (or box). The colour and freshness of the meat can be seen at a glance and the surface texture of the food is clearly visible and looks fresher due to increased gloss of the Skin Pack.

The Skin Pack film contains EVOH, a high barrier material that can maintain the freshness of the contents. Our Skin Pack solution consists of a top film and a bottom box. The top film and bottom box are tightly laminated and the meat does not easily produce blood and has the properties of being easy to peel without using a knife to contaminate the ingredients and once opened the meat can be cooked or frozen directly, which is hygienic and convenient.
